Last Drench	

Species (<i>circle one</i>)					
	Sheep	Cattle	Goats	Alpacas	
Sex (<i>circle one</i>)					
	Male	Female	Pregnant	Desexed	Mixed
Date of Drench					

STEP 1: Choose Your Test

Standard Individual

- Worm Egg Count, 15 samples. Used for monitoring & ASBV's. Dawbut's standard test.

Standard Pooled

- Worm Egg Count, 3 pooled counts + average. Identifies if worms are present in a mob.

Sensitive Individual

- Worm Egg Count, 15 samples. Best suited to cattle monitoring & FECRTs.

Sensitive Pooled

- Worm Egg Count, 3 pooled counts + average. Best suited if you need a more sensitive pooled check.

"Trader Special"

- Worm Egg Count, 15 samples + Worm ID + Fluke Test. Perfect test bundle for traders who wish to see the full range of the worm burden in their mob, plus the worm type, and a fluke check.

"Works Burger"

- Worm Egg Count, 3 pooled counts + Worm ID + Fluke Test. Identifies if worms are present, specifies the type of worm, and checks for fluke.

STEP 2: Extra Testing

WormID (*Larval Differentiation*)

- To identify the worm type, a larval culture takes 7-10 days. Average count must be »100EPG.

Fluke Sedimentation Test

- Detects liver and stomach fluke eggs. Results are either *positive* or *negative*.

*Reporting time from arrival in laboratory for most tests is 24 hours.

*For sheep & cattle drench tests, contact us directly.

STEP 4: Pay For Your Test

☐ Invoice direct to contact details as listed above

([Web Download](#))

☐ Invoice to:

For prices refer to dawbuts.com

STEP 5: Prepare Your Sample

1. **Chose a test.** Make sure to fill out all sections. (*see front page*)
2. **Collect sample** in the tray provided using one of the following methods:
A) *Sample directly from the rectum of 15 animals selected randomly from the entire mob.*
B) *Calmly move mob into a clean section or corner of the paddock or yard, and hold them for 10-15 minutes. After you have moved them on, collect 15 separate fresh samples of dung. Fill the collection wells, but don't let them overflow. Try to avoid putting in grass, dirt, or seeds in with the samples.*
3. **Seal airtight** by firmly pressing edges and surrounds of wells on the tray.
4. Place the collection tray **in the zip-lock bag** and place this back **into the cardboard box**.
5. Include this completed request form (*outside of zip lock bag*) **inside the box**.
6. Place box in **REPLY-PAID** post bag and send via **Australia Post Express Post**. (*YELLOW Post Box or at the counter of your local Australia Post outlet*)
7. **Keep the yellow sticker** with the Australia Post Express tracking number. This will help keep track of the package, should the delivery take longer than expected.
8. Make sure to send the samples **as soon as possible!** (*preferably the same day*) If this cannot be done keep the sample in a cool, dry place, **but DO NOT refrigerate** as it will destroy the chance to conduct larvals effectively and accurately.

STEP 6: Submit Your Test

- ☐ I understand that the results will be dependent on a range of factors including the collection of the sample, packaging and timely dispatch.
- ☐ I acknowledge that Dawbuts Pty Ltd is not liable for any loss incurred for delay in processing or testing of the provided samples.

Sign the dangerous good declarations and put me in the EXPRESS POST either in a yellow post box or at the post office counter
